Switch to Elvitegravir-Cobicistat-Tenofovir DF-Emtricitabine

Study 123
Switch to Elvitegravir-Cobicistat-Tenofovir DF-Emtricitabine Study 123: Design

**Study Design: 123**

- **Background**: Open-label, randomized study, Phase 3b trial evaluating switching to once-daily elvitegravir-cobicistat-tenofovir DF-emtricitabine from twice daily raltegravir plus tenofovir DF-emtricitabine

- **Inclusion Criteria (n = 48)**
  - HIV RNA <50 copies/mL
  - On RAL+ TDF-FTC for ≥6 months
  - Not taking any other ART
  - No new AIDS-defining conditions

- **Treatment Arms**
  - Switch to EVG-COBI-TDF-FTC

Conclusion: “All participants switching to 1 tablet once-a-day elvitegravir/cobicistat/emtricitabine/tenofovir disoproxil fumarate (Stribild) from a twice-daily raltegravir + emtricitabine/tenofovir disoproxil fumarate regimen remained virologically suppressed. Stribild was well tolerated. Switching to Stribild may be a viable option for virologically suppressed patients wanting to simplify from a twice-daily raltegravir-containing regimen.”
