Switch to Atazanavir-RTV with Either Raltegravir or TDF-FTC

HARNESS Trial
Switch to Atazanavir-ritonavir with Either Raltegravir or TDF-FTC

HARNESS: Study Design

**Study Design: HARNESS**

- **Background:** Open label, prospective, randomized, parallel group trial evaluating switching from stable ARV regimen (2 NRTIs + 3rd agent, excluding atazanavir) to ritonavir-boosted atazanavir with either raltegravir 400 mg BID or TDF-FTC

- **Inclusion Criteria (n = 109)**
  - Age >18
  - HIV RNA <50 copies/mL for ≥ 3 months
  - Single HIV RNA <40 copies/mL in past 30 days
  - No history of virologic failure or resistance

- **Treatment Arms**
  - Atazanavir + RTV QD + Raltegravir 400 mg BID
  - Atazanavir + RTV QD + TDF-FTC QD

Switch to Atazanavir-ritonavir with Raltegravir or TDF-FTC

HARNESS: Results

Week 24 and 48: Virologic Response (Intent-to-Treat Analysis)

Switch to Atazanavir-ritonavir with Raltegravir or TDF-FTC

HARNESS: Results

Week 24 and 48: Virologic Rebound

Switch to Atazanavir-ritonavir with Raltegravir or TDF-FTC

HARNESS: Conclusions

**Conclusion:** “In conclusion, switching to ATV/r + RAL resulted in a higher virological rebound rate than switching to ATV/r plus tenofovir disoproxil fumarate/emtricitabine.”
